

TriCal Surge™ Spring Forage Triticale

Overview:

TriCal Surge™ is a forage spring triticale variety developed in the United States that has broad adaptation across the triticale growing areas in Western Canada. TriCal Surge™ is an awnless type with excellent silage and forage yields and excellent silage quality features. It has very good straw strength, shorter stature and very good leaf rust resistance.

Features:

- High silage and forage yield potential
- Awnless
- Shorter straw and very good lodging resistance
- Resistant to leaf rust
- Excellent silage quality with higher dry-matter protein content
