

CDC Calvi

Canaryseed

A proven high-yielding canaryseed with excellent seed quality

- High yields (105% of CDC Bastia)
- Full season maturity (similar to Keet)
- Taller but with good lodging resistance

YIELD PERFORMANCE

OVERALL CHARACTERISTICS

Maturity	Late
Height	Tall
Growing Zone	All canaryseed growing areas (SK)
Lodging Resistance	Good
Test Weight	71.2 kg/hl
Thousand Kernel Weight	8.3 g
Seed Coat Color / Appearance	Brown / Glabrous

CDC Calvi

Technical Information

SK Varieties of Grain Crops - 2022

Variety	Yield % Check	Maturity Days	Height cm	Days to Heading	Test Weight kg/hl	Seed Weight g/1000
CDC Calvi	106	101	106	58	71.5	8.3
CDC Bastia	100	98	102	56	70.8	8.0
CDC Cibo*	107	97	93	56	70.4	8.2
CDC Lumio	117	99	105	58	70.2	8.4
Cantate**	115	100	99	57	63.8	8.5
Keet**	127	101	106	60	64.7	7.8

*CDC Cibo is yellow-seeded while the other varieties produce brown seed;

**Cantate and Keet are hairy type; all others are glabrous type. Glabrous varieties that have been dehulled are approved for human consumption in Canada and the United States, but markets are currently limited.

Origin: Crop Development Centre, University of Saskatchewan

Pedigree: C02074/C02034
